18 SUPPLEMENTARY NOTES

Program (ARTEP), Reserve Component (RC), Candidate ARTEP Evaluation Implementation Option, Prime Candidate Option, Cost, Effectiveness, Average Evaluation Cost (AEC), Estimated Cost Based on ARTEP Document (ECD), Individual Respondent Option Score, Respondent Group Option Index, Respondent Group Option Choice, Option Effectiveness Index, Rank, Assessment System, Sensitivity Analysis.

20 ABSTRACT (Continue on reverse alde if necessary and identify by block number) This report documents re-

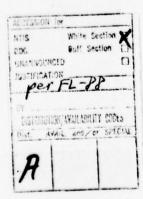

search & presents methodology used to develop options for implementing Reserve Component unit evaluations using the Army Training & Evaluations Program(ARTEP) to determine & select cost-effective options, & to design an assessment system based on the selected options for different type unit with consideration of unit deployment objectives. The report also provides recommendations for substituting qualified noncommissioned officers for officer evaluators in selected positions in conducting evaluations with ARTEP. Finally, the report provides a survey classification of training sites suitable for conducting ARTEP evaluations.

ANNEX A

ARTEP EVALUATION COST

1

I

I

This annex presents detail in support of the discussions and analysis based on evaluation cost in the main report (Vol. I). The annex consists of the annex proper and two appendixes. The annex proper identifies the cost elements that in the aggregate constitute ARTEP evaluation cost, discusses data collection, explicates the methodology used to derive estimates of ARTEP evaluation implementation option costs for each type ARTEP used in the AT 75 and AT 76 Reserve Component ARTEP evaluation program, analyzes cost differences, and provides two estimates of the annual cost of an RC ARTEP evaluation program involving all the units in a given NATO contingency deployment list.

Appendix 1 contains tables of AT 75 cost data to supplement the information in the annex proper; and Appendix 2 similarly contains tables of AT 76 cost data.

Annex A

ARTEP EVALUATION COST

1. Introduction

- a. General. This annex presents a detailed discussion of the cost data collection and analysis effort and an explication of the methodology used to develop cost estimates for Reserve Component unit ARTEP evaluations conducted during annual training (AT) 1975 and AT 1976. Congressional interest in the Army's combat readiness, the Army's concern for the cost of training exercises to produce readiness and the Army's cost systems appeared to make the assembly of cost data for ARTEP evaluations a routine task. However, despite the generation of significant amounts of cost information and on-going costing efforts by the U.S. Army, not all the cost data required for the Reserve Component Unit Evaluation Analysis (Cost-Effectiveness) study were available in fact, or in usable form.
- b. Cost Data Requirements. The cost data to be collected were identified with the assistance of cognizant headquarters and agencies. Both investment and operational costs for ARTEP evaluations were sought. No data for investment cost were identified for either annual training year. The operational cost considered included Operation & Maintenance and Military Personnel for Army, National Guard and Army Reserve as well as Procurement of Ammunition, Army funds.

- c. Excluded Cost. Initial planning included the determination of a base cost for Army Training Tests (ATT) now replaced by ARTEP. When, however, it soon became apparent that base cost was not available the concept of an ARTEP evaluation cost was developed. As defined (see paragraph 5b) ARTEP evaluation cost does not include cost judged common to all type evaluations (such as ATT, Operational Readiness Training Tests, ARTEP). Accordingly, the following type costs were excluded from the Cost-Effectiveness (C-E) analysis.
- (1) Personnel cost for the evaluated RC unit and RC evaluators, because personnel are paid for AT whether they participate in evaluation or simply train.
- (2) Travel and Per Diem for the RC unit being evaluated, because travel is necessary for the required attendance at AT.
- (3) Meal cost incurred for rations are consumed at AT regardless of activity.
- (4) Evaluator training cost, because such training is conducted regardless of the type evaluation.
- (5) Self service supply center cost, because such support is required for any evaluation.
- (6) Medical support cost, because such support is required for any evaluation.

(7) Personnel cost for the aggressor force because of the training value in this type duty.

2. Guidance and Assumptions.

- a. Guidance. The approach to the study and the C-E analysis methodology were outlined in the First Interim Report dated 15 May 1975 and the Second Interim Report dated 15 March 1976.
- (1) At the Study Advisory Group (SAG) meeting on 10 June 1975 to review the First Interim Report, it was agreed that additive cost rather than total cost was probably more determinable, a sensitivity analysis be conducted to identify additional cost incurred by units having to travel to sites more distant than their normal AT sites, and that D+60 NATO contingency deployment would be used as a discriminator for programming Reserve Component unit evaluations. Consultations with DA DCSOPS and DCSLOG led to obtaining the acquisition cost of ammunition items from the Deputy Chief of Staff for Research, Development, and Acquisition (DCSRDA) and the Fiscal Year (FY) 1977 budget figures for petroleum (POL) cost.
- (2) The SAG meeting of 29 March 1976 was held to review the Second Interim Report. The SAG requested sensitivity analysis regarding RC evaluator and support personnel cost and inclusion of a comparison of AT 75 and AT 76 costs for the final report.

b. Assumptions. The costing of personnel support for ARTEP evaluations for the evaluation planning group, evaluators, and support personnel was accomplished using standard military labor rates. The evaluated unit, RC evaluator and aggressor personnel were not costed. That some efficiencies are realized for biennial evaluations is acknowledged; conversely, quadrennial evaluations result in higher start-up cost. Because these proficiency gains and losses are dependent on the source and qualification of personnel as well as the personnel turnover rate, a linear cost discrimination was assumed between biennial, triennial and quadrennial evaluations.

3. Cost Elements.

- a. Elements. The elements of cost for which data were collected were developed in cooperation with cognizant headquarters and agencies and are identified in Table A-1; Tables begin on page A-28. The cost data elements are operational in nature; no investment costs were identified for the evaluations in either AT 75 or AT 76.
- b. Operational Cost. Six elements of operational cost were identified:
 Personnel, Travel, Per diem, POL, Maintenance and Ammunition to support
 the evaluation. Cost data collection is necessary for the planning
 evaluation headquarters responsible for the conduct of the evaluation
 and writing the scenario; the evaluator group; support personnel such

as drivers, radio operators, range personnel; the threat force (aggressor) personnel; the evaluated unit; attached and supporting units. Personnel data is reportable by the number of personnel by category (O, WO & EM) and man-days by rank. Travel and per diem costs are necessary for personnel who must travel to the evaluation site. POL consumed is accumulated in gallons by type - MOGAS, DIESEL and jet fuel (JP4). The maintenance cost is identified as the cost of the repair parts used during the evaluation and as a result of the post evaluation technical inspection.

Ammunition is reportable by type and quantity utilized during the evaluation.

4. Data.

- a. Sources. As planned at the outset of the study, the C-E analysis was dependent on the availability and use of existing data to determine the base (ATT) costs. Visits made to arrange for and collect such cost data are listed in Tables A-1-1 for AT 75 and A-2-1 for AT 76. During these visits the necessity to collect data was reviewed, the need for accurate data was explained, and definitions of data elements were clarified. The visits indicated that a detailed cost feedback system to identify the specific cost elements by unit and specific tactical exercises for RC units is nonexistent. The assistance of the tactical units was sought to collect the data elements necessary for the study.
- b. Quantity. Cost-effective analyses in general require large amounts of information; this study required data which the existing cost

feedback system does not accumulate. Headquarters, FORSCOM and the National Guard Bureau assisted in coordinating the collection effort. The AT 75 study plan identified 81 elements of data, 54 from the Active Army (6 elements for 9 evaluations during AT 75) and 27 from the National Guard (3 elements for the 9 evaluations) to be collected. The National Guard obtained all the data and the Active Army collected 46 elements of data (see paragraph 5b). The AT 76 study plan identified 729 data elements, 486 from evaluator groups (Active Army, Maneuver Training Command, and RC) and 243 from evaluated units.

Quality. The completeness and accuracy of the data were important because of the data projection to average type battalion costs and the need to extrapolate to all RC units in the Army. The quality of data varied accordingly as data were available and as definitions and collection instructions were understood. Thus, direct comparability in all cases was not feasible. Visits to Fort Hood, Fort Carson and Fort Lewis established that reportable maintenance cost would be incomplete. The cost system for direct support (DS) and general support (GS) maintenance shops charged the shop and not the unit receiving the support so this data was not available. However, a register was to be kept on spare parts provided to RC units so that data could be made available. Here, the maintenance data reported would be for spare parts used during the evaluation period and as the result of the post evaluation technical inspection (TI). Nonetheless, since during the tactical portion of the exercise the primary effort is on keeping vehicles rolling, the maintenance costs collected might not be realistic.

d. Data Utilization. FY 77 budget prices for POL were obtained from DA DCSLOG to filter out the change in actual cost and to project future cost. Likewise acquisition cost of items of ammunition were obtained from DCSRDA to project more realistically the cost for future ARTEP evaluations rather than use the actual cost of ammunition consumed. Telephone communication was maintained with the data collectors to clarify and explain the data received. The data received were priced and extended where necessary. The data were tabulated for each evaluation, segregating Evaluated Unit (POL, maintenance and ammunition) and Evaluator Group (personnel, travel, per diem, POL, maintenance and ammunition) cost. Extreme values were eliminated from further consideration, or where practicable more realistic estimates were substituted. In addition, the cost data were normalized to facilitate comparisons. This treatment of the data will be identified and explained in the following discussion of evaluation cost.

5. Evaluation Cost.

a. General. Visits to Headquarters, FORSCOM and to the posts and divisions where evaluations were to take place failed to identify satisfactory cost data for RC battalions being evaluated against the ATT. The use of available incomplete base case data would reduce the creditability of any cost estimates established. Even though evaluation cost was to be collected, soft base cost data would make the additive cost suspect. The data collection effort designed to capture the cost of AT 75 and AT 76 evaluations was to provide current actual data for the personnel support, POL, ammunition, maintenance, travel and per diem. The concept of evaluation cost for type battalions was developed for costing ARTEP evaluations, identifying cost for evaluations at level 3,

and projecting the cost for each option. The concept provides the ability to extrapolate the additive cost for type battalions for the entire Reserve Component system.

b. Definition. The evaluation cost is designed to identify the cost to support an ARTEP evaluation. Evaluation cost (EC) for type battalion was calculated as the sum of all cost elements (EG being evaluator group and EU the evaluated unit) as applicable and provided:

EC \approx AM (EG & EU) + MT (EG & EU) + PD (EG) + PR (EG) + PL (EG & EU) + TV (EG) Following are definitions of each data element and the rules for how the data were used to derive evaluation cost.

- (1) Ammunition. Ammunition (AM) items required for the evaluation were costed with acquisition cost as received from DCSRDA.
- (2) Maintenance. Maintenance (MT) cost was limited to the cost of repair parts utilized during the evaluation and after post evaluation TI.
- (3) Personnel. The cost of personnel (PR) support by the Evaluator Group, except the aggressor, was used in consideration of the effect on Active Army unit readiness and personnel nonavailability for normal duties. The cost of evaluator support by the evaluated unit or by other RC units was not considered because attendance at AT accrues cost whether or not an evaluation takes place. The cost of the aggressor unit whether Active Army or RC, was not considered because of the excellent training received while playing the role of aggressor. Maneuver Training Command (MTC)

personnel support applied only for evaluators because the task of scenario preparation would probably be handled during inactive duty training (IDT). The MTC normally does not provide support personnel for evaluations.

- (4) Petroleum, Oil and Lubricants. The quantities of petroleum (PL) products MOGAS, DIESEL, and JP4 consumed for the evaluation were multiplied by the FY 77 budget costs as provided by DA DCSLOG.
- (5) Travel. The cost of travel (TV) for personnel required to support the evaluation was dollar value or PL consumption as reported.
- (6) Per Diem. Per diem (PD) for personnel necessary to support the evaluation was accumulated by numbers of officer and enlisted personnel times the number of days in a travel status.
- c. Evaluation Cost Models. Using the EC formula and rules cited above, the following evaluation costs were developed: average AT 75 evaluation cost (AEC5), evaluation cost based on the ARTEP document (ECD)*, average AT 76 evaluation cost (AEC6).
- (1) Average AT 75 evaluation cost (AEC5) for three type battalions Mechanized Infantry, Tank, and Field Artillery evaluated at level 3 by Active Army evaluators were derived with reported PL and ammunition consumption projected on acquisition cost.
- (2) Evaluation cost based on the ARTEP document for AT 75 (ECD5) was developed for all evaluator sources (AA, RC, MTC and mixes)

^{*} ECD developed as part of the AT 75 program are designated ECD5; those for AT 76 ECD6. A 2 or a 3 after the 5 or 6 in these abbreviations designate, respectively, level 2 or level 3 evaluation.

for level 3 (level 2 for FA) and level 2 (level 1 for FA). The ECD were based on averages of the actual AT 75 evaluation costs of PL and maintenance, and on estimates for personnel and ammunition in accordance with numbers and quantities recommended in the ARTEP document. Travel and per diem were computed for personnel traveling to the specific AT 75 sites.

- (3) Average AT 76 evaluation cost (AEC6) was developed similarly as AEC5. AT 76 data include MTC and RC evaluator cost experience as well as cost for Active Army evaluators.
- (4) Evaluation cost based on the ARTEP document for AT 76(ECD6).

 Based on experience gained during TY 1974-75 and on recommendations in the TRADOC/FORSCOM ARTEP Validation Report changes were introduced into ARTEP documents used for AT 76 evaluations. Also during AT 76, ARTEP not used during AT 75 were employed (e.g., Maintenance, Military Police, Infantry, and 105 mm Towed Field Artillery). ECD6 for all these ARTEP were developed similary as the ECD5.

6. AT 75 Evaluation Cost

a. Average AT 75 Evaluation Cost (AEC5). During AT 75 nine RC battalion evaluations with AA evaluators were conducted as a part of the FORSCOM/TRADOC validation program. Cost data as reported for these evaluations are shown in Tables A-1-2 to A-1-4. From these data, average AT 75 costs were developed for three type battalion evaluations - Infantry (M), Tank, and 155 (SP) Field Artillery - at level 3 (one FA at level 1).

Averages for both EG and EU were obtained by adding available data and dividing by the number of type units reporting. See Table A-1-5 to A-1-7.

- (1) Ammunition. The quantities of ammunition items actually used during evaluations as reported were costed using the DCSRDA cost. The 1/303 AR Bn could not use pyrotechnics or blanks because of the potential for fire which existed at Yakima Firing Center; on the other hand, the 1/303 was the only Tank battalion to fire tank weapons in the AT 75 program. The 1/195 AR Bn cost does not include 4.2 in. mortar ammunition, but does include aggressor support by Troop E, 67th Cavalry. Ammunition data was not available for Active Army evaluators participating in the 1/123 AR, 3/117 IN (M), 1/134 IN (M) and 1/168 FA battalion evaluations.
- evaluation in the context of a battalion Field Training Exercise (FTX) including the battalion slice support to each company. The actual spare parts cost was based on the actual number of vehicles utilized by the RC units. In that the maintenance cost reported by most RC units did not include the cost of DS and GS maintenance shop support, the estimated figures reported for the 81st Brigade provided average costs nearer actual maintenance costs for the battalions. EG cost for maintenance was unavailable for the 3/117 IN (M) and 1/123 AR evaluations.
- (3) Personnel. The personnel support provided the RC units during AT 75 was greater than required by the ARTEP for two compound

reasons: all the RC units were affiliated, two battalions were roundout, all had Active Army support, and seven of the nine evaluations took place at Active Army installations; AT 75 evaluations were the first for RC units and the overall effort was designed to validate the documents. Thus, it may be that less personnel support will be provided future evaluations, more in line with the ARTEP. The stratification of personnel data was not uniform, so comparisons concerning the various types of personnel support were deemed infeasible. Average personnel cost for the AT 75 evaluations applied only to Active Army evaluators. The personnel support for the 1/134 IN (M) battalion evaluation included home station support of the affiliation program.

- (4) POL. Petroleum products used during the AT 75 evaluations were costed using the FY 77 cost rates supplied by DA DCSLOG. The cost for 1/195 AR battalion evaluation includes aggressor support by Troop E, 67th Cavalry. EG cost was unavailable for the 3/117 IN (M) and 1/123 AR battalion evaluations.
 - (5) Travel and Per Diem.
- (a) Travel cost was reported as actual total dollars or as actual POL consumed to move personnel required to support the evaluation.

 Cost for the 1/11 IN battalion includes \$26,636 for USAF C-141 support.
- (b) Per diem was the amount actually paid for personnel who had to travel to support an ARTEP evaluation.

- b. Evaluation Cost Based on the ARTEP Document. The evaluation cost based on the ARTEP document for AT 75 (ECD5) was under development concurrently with the collection and tabulation of AEC cost data. The ECD were developed by type battalion for level 3 (ECD53) and level 2 (ECD52), Tables A-1-8 to A-1-10, for all evaluator sources. Each ECD was accumulated as follows:
- (1) Ammunition. The ammunition items prescribed in the ARTEP documents used for AT 75 evaluations were costed for levels 3 and 2 (see Tables A-1-11 to A-1-13) using the DCSRDA rates.
- (2) Maintenance. The maintenance cost developed for the AT 75 evaluations was used as being the best available estimate.
- (3) Personnel. The number of evaluators and support personnel by rank to support the evaluations was costed by standard military labor rates for levels 3 and 2 (see Tables A-1-14 to A-1-16).
 - (a) AA evaluator and support personnel were costed.
- (b) RC personnel were not costed because the RC personnel are required to attend AT. Personnel contacted at RC headquarters advised that they would handle an evaluation within their own resources with personnel at AT at the time of the evaluation.
 - (c) MTC normally will not provide support personnel.
 - (d) Mix AA+ utilized 75% of the AA cost, 12.5% of the

RC cost (0), plus 12.5% of the MTC cost.

I

1

- (e) Mix RC+ utilized 25% of the AA cost and 75% of the RC cost.
- (f) Mix Equal utilized 50% of the AA cost, 25% of the RC cost, and 25% of the MTC cost.
- (4) POL. POL consumption based on the actual number of vehicles utilized by the RC units for the AT 75 evaluations was utilized as the best available estimate.
 - (5) Travel and Per Diem.
- (a) Travel. Travel cost was projected by the number of personnel required to support the AT 75 evaluations at the actual sites and the 15 June 1975 Official Airline Guide rates as outlined in paragraph 5d above. (See Tables A-1-17 to A-1-19).
- (b) Per Diem. Per diem costs were developed similarly for the number of officers and enlisted men on temporary duty away from home station to support evaluations. (See Tables A-1-20 to A-1-22).
- (6) Option Cost. The ECD estimated the cost by evaluator source and ARTEP evaluation level for battalion evaluations. It was necessary to derive EC across all frequencies of evaluation to complete the cost estimates for all 36 options. Because proficiency gains for biennial evaluations and losses for quadrennial evaluations are dependent on

source of evaluator and evaluator qualification, as well as turnover rate, a linear cost discrimination was assumed between biennial, triennial and quadrennial evaluations. See ECD5 by option in Table A-1-23.

c. ARTEP Document Analysis

(1) The ARTEP.

- (a) ECD53 and ECD52. The three ARTEP documents for which data were collected during AT 75, 7-45 for Mechanized Infantry Battalion, 17-35 for Tank Battalion, and 6-365 for Field Artillery 155 (SP) Direct Support Units were analyzed. The analysis costed all evaluators and support personnel. The ECD5 for a Mechanized Infantry battalion ARTEP evaluation at level 2 is 6.4% above the ECD53; for a Tank battalion the ECD52 is 39.5% greater than the ECD53; and for a Field Artillery battalion the ECD52 is 1.194 times the ECD53. See Table A-1-24.
- (b) ECD53 and AEC53. The average AT 75 costs of evaluations with AA evaluators, AEC53 and ECD53, were compared. The Mechanized Infantry AEC53 was 15.8% below the ECD53, while the AEC53 for Tank and Field Artillery battalions were 18% and 42.8% above the ECD53, respectively. The comparisons are shown in Table A-1-25.
- (2) Data Element Analysis. The combined cost of ammunition and personnel support represented 84% and 78% of the Infantry and Tank evaluation ECD53, respectively, and 85% of the Field Artillery evaluation ECD52.

(a) Ammunition.

<u>1</u> The cost of additional ammunition recommended in the ARTEP to support different evaluation levels varied between 2.7 and 54 percent. Table A-1-26 shows the cost of ammunition for a Mechanized Infantry battalion as \$49,347 for level 3 and \$50,664 for level 2, an increase of only 2.7%; the cost for level 1 is \$70,456 - 39% above the level 2 cost.

<u>2</u> Ammunition used for AT 75 evaluations was compared with that recommended in the ARTEP document. Table A-1-27 reflects the ammunition cost for the four Infantry battalions evaluations averaged 37% less than the cost of the ammunition recommended in the ARTEP while the ammunition costs for the two Field Artillery battalions evaluations exceeded the cost of the ammunition recommended in the ARTEP by 69.6% and 117%.

(b) Personnel.

1 The affiliation and ARTEP validation programs raised the average battalion personnel cost for the AT 75 evaluations. Comparisons were made of the ARTEP suggested number of support personnel for the three evaluation levels. The Field Artillery ARTEP recommends the same personnel support for levels 2 and 1. Table A-1-28 shows the ECD53 for a Tank battalion evaluation is \$22,330 for evaluators and \$6,785 for support personnel for a total of \$29,115. The ECD52 total of \$33,095 is 13.7% greater than the ECD53.

- $\frac{2}{2}$ The average cost of personnel support utilized for AT 75 evaluations was compared with that recommended by the ARTEP document. As shown in Table A-1-29, the personnel support component in the Field Artillery battalion AEC53 was \$25,927 or 26.4% above the ECD52 component of \$20,510.
- 3 Recommendations made in the Analysis of ARTEP
 Evaluator Tasks and Position Assignments (Annex C)
 introduce potential reductions in the cost of personnel support and per
 diem required for ARTEP evaluations. The Analysis recommends
 substitution of 12, 6 and 1 NCO for officer evaluators for the IN, TK and
 FA evaluations. For example, a captain's daily personnel rate is \$56/day
 compared to \$43/day for an E6; and per diem rates are \$8.30 and \$2.00,
 respectively; a potential savings of \$19.30 per day per substitution
 of qualified NCO for captains.
- d. Sensitivity Analysis (SA). Analyses were made to determine the sensitivity of the total cost to changes in selected element costs.
- (1) ECD Cost. Cost elements were varied \pm 10% to allow for cost fluctuations or errors in the cost data. Variance analysis was based on comparisons of the 36 options ranked by cost.'
- (a) Tank Battalion. Four combinations of cost elements were varied by + 10% to develop sensitized total costs. Sensitivity analyses were accomplished for personnel (SAP), ammunition (SAA), maintenance and POL (SAM), and travel and per diem (SAT). The set of 10 lowest cost options, see Table A-2, remained unchanged regardless of which element was

varied. There were, however, several shifts in rank among the 8 sets of top ten. Of 10 shifts among the 80 ranks, none was more than two positions. The proportion of the ECD by element, and the percent change in ECD with + 10% changes in element cost are:

Cost Element	Percent of ECD	Percent change in ECD
personnel	25.46	2.2975
ammunition	50.71	5.1583
maintenance & POL	18.98	2.0150
travel & per diem	4.85	0.4308

(b) Infantry Battalion (M). The cost elements varied were the personnel and ammunition which together represent 83% of the ECD. From the 10 lowest ECD options, see Table A-3, option 29 dropped when the SAP was decreased 10%, and the SAA was increased 10%; option 18 replaced option 29 in both cases. Two options shifted in rank; however, neither moved more than 2 positions. The proportion of the ECD by element, and the percent change in ECD with + 10% changes in element cost are:

Cost element	Percent of ECD	Percent change in ECD
personnel	22.42	2.0483
ammunition	60.75	6.2658
Total	83.17	
Other	16.87	

(c) Field Artillery (155 mm) Battalions. Personnel and ammunition which together represent 84% of the ECD were varied + 10%. The best ranked 10 options, see Table A-4, remained invariant as a set.

Although four of forty ranks changed, each shifted only 1 position.

The proportion of the ECD by element, and the percent change in ECD with + 10% changes in element cost are:

I

1

I

1

I

I

I

1

I

I

Cost element	Percent of ECD	Percent change in ECD
personnel	21.63	2.1233
ammunition	62.32	6.3775
Total	83.95	
Other	16.05	

- (2) RC Personnel. The SAG guidance included a requirement for SA on RC evaluator and support personnel costs (SAR). Charging RC personnel support negates the view that RC personnel cost is a sunk cost since RC personnel are required to attend AT whether or not their assignments are in support of an evaluation. Nonetheless, applying full RC personnel cost increased ECDs and caused shifts in the rank order of the ten lowest cost options, see Table A-5. The SAR shifted out from the lowest cost ten set options 11 and 29 for IN and FA, and option 27 for TK battalion evaluations. The SAR introduced into the lowest cost ten set option 3 and 18 for IN and FA, and option 5 for TK battalion evaluations.
- (3) Travel. The SAG guidance also included a requirement for sensitivity analysis to identify additional cost incurred by units required to travel to ARTEP evaluation sites more distant than their normal AT sites. The concern for additional travel cost was allayed with the identification of 54 sites in the United States which meet ARTEP evaluations

requirements. The sites are discussed in a survey of major training sites (Annex D). The survey was based on an analysis of the maneuver area requirements for maneuver battalions and the equipment needed on site to permit an evaluation in accord with the ARTEP.

7. AT 76 Evaluation Cost

a. General.

- (1) Average AT 76 Evaluation Cost (AEC6). A data collection program for AT 76 RC unit ARTEP evaluations (81 companies) was generated from the FORSCOM Tentative Schedule of Formal ARTEP Evaluations, TY 75-76. Two evaluations for eight ARTEP with each type evaluator group (AA, RC, and MTC) were included where possible. Data collected and available, as of the 15 September 1976, was received for 40 battalion evaluations. The treatment was generally as described in paragraph 6a; modifications are identified.
- (a) Ammunition. The quantities of ammunition items reported used during evaluations were costed using the DCSRDA cost. Costs were obtained from SB700-20 where not available at DCSRDA.
- (b) Maintenance. The spare parts reported used during the evaluation and as a result of the post evaluation technical inspection were costed. Where units did not include the item cost, the Army Master Date File was used.
- (c) POL. Petroleum used during the evaluation was costed using FY 77 cost rates supplied by DA DCSLOG.

- $\mbox{(d) Personnel.} \ \ \mbox{MTC evaluators were not costed if the}$ evaluation took place during the MTC AT.
- (e) Travel and Per Diem. MTC personnel who were evaluating as part of their AT had no travel or per diem cost.
- <u>1</u> Travel cost was reported air fare based on the <u>Official</u>

 Airline <u>Guide</u> of August 1, 1976 or as mileage travelled and the rate per mile.
- $\underline{2}$ Per Diem was that paid for the personnel supporting the evaluations.
- (f) Data were not available for more than one complete battalion so the AEC was derived from the average of that battalion and a composite made up from companies and batteries.
- (2) Evaluation Cost Based on the ARTEP Document. The evaluation cost for AT 76 based on the ARTEP document (ECD6) was under development concurrently with the collection and tabulation of AEC cost data. The ECD will be developed by type unit for level 3 (ECD63) for all ARTEP and for level 2 (ECD62) where the ARTEP were applicable to battalion; the Military Police and Maintenance companies were developed only for level 3 for all evaluator sources. Each ECD was accumulated as described in paragraph 6b.
- (a) Ammunition. The ammunition items prescribed in the ARTEP documents used for AT 76 evaluations were costed using the DCSRDA rates. The Tank and Field Artillery (105mm) were changed in September 1975 with a result that the recommended quantities of ammunition are changed from those for AT 75 evaluations.

- (b) Maintenance. The maintenance cost developed for the AT 76 evaluations was used as being the best available estimate.
- (c) Personnel. The number of evaluators and support personnel by rank to support the evaluations was costed by standard military labor rates.
- $\underline{1}$ AA evaluators and support personnel were costed for evaluations at AA sites, but the AA could not provide support personnel for all RC sites.
- $\frac{2}{2}$ RC evaluators were not costed because RC personnel are required to attend AT. RC units handled evaluations within their own resources with personnel at AT at the time of the evaluation during AT 76. Support personnel data was obtained to permit costing support personnel.
- $\underline{3}$ MTC did not provide support personnel. Evaluator personnel were not costed if evaluation took place during their AT.
- $\underline{4}$ Mix AA+ utilized 75% of the AA, 12.5% of the RC, 12.5% of the MTC evaluator cost plus the support personnel cost.
- $\underline{5}$ Mix RC+ utilized 25% of the AA and 75% of the RC evaluator cost plus support personnel cost.
- $\underline{6}$ Mix Equal utilized 50% of the AA, 25% of the RC, and 25% of the MTC evaluator cost plus the support personnel cost.
- (d) POL. POL consumption for the AT 76 evaluations was utilized as the best estimate available.

(e) Travel and Per Diem.

 $\underline{1}$ Travel. Evaluator sources were costed by mileage or air rates in the August 1, 1976 Official Airline Guide.

 $\frac{2}{2}$ Per Diem. Per diem costs were developed for the number of officers and enlisted men on temporary duty away from home station to support evaluations.

(f) Option Cost. The ECD estimated the cost by evaluator source and ARTEP evaluation level for ALL AT 76 evaluations for all eight ARTEP. It was necessary to derive EC for all frequency alternatives to complete the cost estimates for all 36 options (18 options for MP and MAINT company evaluations). Because proficiency gains for biennial evaluations and losses for quadrennial evaluations are dependent on source of evaluator and evaluator qualifications as well as turnover rate, a linear cost discrimination was assumed between biennial, triennial and quadrennial evaluations.

(3) ARTEP Document Analysis.

- (a) ARTEP AEC63 and ECD63. The evaluation costs with AA evaluators, AEC63 and ECD63 are compared to determine how close the actual evaluations are coming to the ECD. AEC63 was also compared to ECD62.
- (b) Data Element Analysis. The combined cost of personnel support and ammunition are the largest cost elements in the ECD and will be compared with the AEC for each ARTEP.

- b. Field Artillery (155mm) ARTEP 6-365.
- (1) Average Evaluation Cost. Data were received from seven battalions but not received from the evaluator group for the three 1-147 battery evaluations nor for a headquarters battery. The need to have the cost for a HHB was handled by using the data for HHB of a 105mm battalion as the best available to determine the cost estimates found in Table A-2-2. The maintenance cost appears to be low because 7 of 13 batteries reported no maintenance cost.
- (2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-3. The ammunition cost is in Table A-2-4. Since the ARTEP does not recommend ammunition except for the 155mm howitzer, the evaluator group ammunition was added. Personnel cost is in Table A-2-5, travel and per diem are in Table A-2-6 and option cost is in Table A-2-7.
 - (3) ARTEP Document Analysis.
- (a) ARTEP Analysis. The comparison of ECD62 with ECD61 is in Table A-2-8. Evaluation cost at level 1 is 20% above the level 2 cost. AEC62 is compared with ECD62 in Table A-2-9 and the AEC is 12% below the ECD. Ammunition and personnel cost account for 92% of the ECD.
- (b) Data Element Analysis. The AT 76 evaluations had ammunition cost below the ECD by 9% compared with AT 75 evaluations which exceeded the ECD by 93%. Personnel support cost (AEC) is 21% below the ECD.

- c. Field Artillery (105mm) ARTEP 6-105.
- (1) Average Evaluation Cost. Data were collected from one complete battalion as the evaluations for another battalion were cancelled. Only headquarters battery reported maintenance cost. Data and AEC are in Table A-2-10. Personnel cost is only for support personnel as the division headquarters conducted the evaluation.
- (2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-11. The ammunition used by the evaluator group was added to the ECD as the ARTEP recommends no ammunition other than for 105mm howitzers. Cost element tables are ammunition A-2-12, personnel A-2-13 and travel and per diem A-2-14. Option cost is in Table A-2-15.
 - (3) Document Analysis.
- (a) ARTEP Analysis. The comparison of ECD62 with ECD61 is found in Table A-2-16. Evaluation cost at level 1 is 10% higher than level 2. AEC62 is compared with ECD62 in Table A-2-17 and the AEC is 12% above the ECD. Ammunition and personnel costs are responsible for 91% of the ECD.
- (b) Data Element Analyses. Ammunition cost for the AT 76 evaluations exceeded the ECD by 127%. First year ammunition cost for field artillery (155mm) exceeded the ECD5 by 93% but it was 9% below the ECD6. The data are only for one battalion and it was the initial 105mm evaluations. AEC personnel support cost was only 3% of ECD due to the evaluator group being RC.

- d. Maintenance (Forward Support Company) ARTEP 29-17.
- (1) Average Evaluation Cost. AEC and cost data for four battalions are in Table A-2-18. Units did report ammunition cost while the ARTEP recommends no ammunition. The MTC were at AT for the evaluations so there was no personnel cost.
- (2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-19. Cost element tables are personnel A-2-20, travel A-2-21, per diem A-2-22. Option cost is in Table A-2-23. The ARTEP does not recommend ammunition.
- (3) ARTEP Document Analysis. AEC63 is compared with ECD63 in Table A-2-24 and the AEC is only 26% of the ECD. Ammunition makes up 30% of the AEC while the ARTEP does not recommend ammunition. The personnel AEC is only 6% of the ECD which reflects the RC and MTC at AT evaluator groups.
 - e. Military Police ARTEP 19-77.
- (1) Average AT 76 Evaluation Cost (AEC6). Cost data and AEC for two Military Police company evaluations are in Table A-2-25. The low density of vehicles (seven 4 ton and five 2½ ton) may be responsible for only \$21.61 in maintenance cost for the two MP companies. Evaluator support for both MP companies was provided by a MTC while the RC battalion in both cases provided support personnel as well as the threat force. The threat force personnel were costed because it was not tactical training as it is in the other ARTEP.

(2) Evaluation Cost Based on the ARTEP Document. ECD6 is in Table A-2-26. The ammunition cost is in Table A-2-27. Personnel cost is in Table A-2-28. Travel and per diem is in Table A-2-29. Option cost is in Table A-2-30.

(3) ARTEP Document Analysis.

- (a) ARTEP AEC63 and ECD63. The evaluation costs with AA evaluators, AEC63 and ECD63 were compared in Table A-2-31. The AEC63 was higher than the ECD63 by 8.9%. The combined cost of personnel support and ammunition represents 90% of the ECD63. The MP evaluations were the first in the program to be conducted by MTC. Future evaluations by MTC personnel may be closer to the ECD. The average personnel support cost was 19.7% above the ECD. The average ammunition cost of \$409 was 44% below the \$731 estimated cost of ammunition for the quantities recommended in the ARTEP.
- (4) Sensitivity Analysis. Sensitivity analyses were made to determined the sensitivity of the total cost to changes in selected element. costs.
- (a) ECD Cost. The cost of personnel support (SAP) which was 80% of the ECD, was varied \pm 10% to consider the effect on the ECD. The average change in ECD was 7.83% for the range of \pm 10% changes in the personnel cost. The option ranks were invariant in this analysis. See Table A-6.
- (b) RC Personnel. Analysis of the RC evaluator cost (SAR) was made. Full application of RC evaluator cost increased the ECD for evaluations

using RC evaluators by 50%, and affected the options rank order. Among ten lowest cost options all shifted position. See Table A-7. The first ranked, option 12, dropped to third place while the second ranked became first. Option 23 replaced option 10. As stated elsewhere the costing of RC evaluators represents a sunk cost because of the requirement for RC personnel to attend AT. ECD, therefore, is suitable for analytical processes in this study.

f. Mechanized Infantry - ARTEP 7-45.

- (1) Average Evaluation Cost. Cost data and AEC for six battalions are in Table A-2-32. The maintenance cost appears low for a mechanized infantry battalion. Two companies reported no cost and another reported only \$25.
- (2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-33. The AT 76 ammunition (see Table A-2-34) deleted the 20mm ammunition for M139 guns mounted on M113 and the claymore mines which are not consumable. Cost elements tables are personnel A-2-35, travel A-2-36 and per diem A-2-37 and option cost is in Table A-2-38.

(3) ARTEP Document Analysis.

(a) ARTEP Analysis. The comparison of ECD63 with ECD62 is in Table A-2-39. Evaluation cost at level 2 is 8% above the level 3 cost. AEC63 is compared with ECD63 in Table A-2-40 and the AEC is only 2% below the ECD. Ammunition and personnel cost make up 85% of the ECD.

(b) Data Element Analysis. The ammunition cost of AT 76 evaluations was 11% below the ECD6 compared to 37% below ECD5. The personnel AEC was only 2% below the ECD.

g. Infantry - ARTEP 7-15.

- (1) Average Evaluation Cost. Cost data and AEC for nine battalions are in Table A-2-41. All MTC evaluator groups were at AT for the evaluations so the personnel were not costed.
- (2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-42. Cost element tables are ammunition A-2-43, personnel A-2-44, travel A-2-45, per diem A-2-46 and option cost is in Table A-2-47. The per diem cost is high because all of the AT 76 evaluations were at RC installations.

(3) ARTEP Document Analysis.

- (a) ARTEP Analysis. The comparison of ECD63 with ECD62 is in Table A-2-48. Evaluation cost at level 2 is 12% above the level 3 cost. AEC63 is compared with ECD63 in Table A-2-49 and the AEC is 25% below the ECD. Ammunition and personnel account for 84% of the ECD.
- (b) Data Element Analysis. The ammunition cost for AT 76 evaluations was 25% below the ECD. The personnel AEC was 12% below the ECD.

h. Tank - ARTEP 17-35.

(1) Average Evaluation Cost. Cost data and AEC for three battalions are in Table A-2-50. Data were not received from A Company, 632 Armor Battalion. The companies of 2-252 Armor reported no ammunition expenditure for their evaluations.

(2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-51. Cost element tables are ammunition A-2-52, personnel A-2-53, travel A-2-54, per diem A-2-55 and option cost is in Table A-2-56.

(3) ARTEP Document Analysis.

- (a) ARTEP Analysis. The comparisons of ECD63 with ECD62 is in Table A-2-57. Evaluation cost at level 2 is 145% above level 3 because of the large increase in ammunition expenditure recommended. AEC63 is compared with ECD63 in Table A-2-58 and the AEC is 62% below the ECD. Ammunition and personnel costs make up 79% of the ECD.
- (b) Data Element Analysis. The ammunition cost for AT 76 evaluations was 64% below the ECD primarily because of the 2-252 Armor reporting zero ammunition expenditure. The personnel AEC was only 18% of the ECD.

i. Engineer - ARTEP 5-25.

- (1) Average Evaluation Cost. Cost data and AEC for eight battalions and companies are in Table A-2-59. Data were not received from the evaluator group for the 122 Engineer Battalion, A Company, 820 Engineer Battalion, B Company, 242 Engineer Battalion, the 890 Engineer Company and the evaluator group nor the 103 Engineer Battalion. The 169 Engineer Company did not report any demolition expenditure. Ammunition expended was only \$16,313 compared to the ECD of \$114,681.
- (2) Evaluation Cost Based on the ARTEP Document. ECD is in Table A-2-60. Ammunition cost is in Table A-2-61 and reflects \$76,847 for squad

and platoon missions. Cost element tables are personnel A-2-62, travel A-2-63, per diem A-2-64, and option cost is in Table A-2-65.

(3) ARTEP Document Analysis.

- (a) ARTEP Analysis. The comparison of ECD63 with ECD62 is in Table A-2-66. Evaluation cost at level 2 is only 5% above ECD62. AEC63 is compared with ECD63 in Table A-2-67 and the AEC is only 16% of the ECD primarily because of the ammunition recommended which is 93% of the ECD.
- (b) Data Element Analysis. The ammunition expended averaged only 14% of the ECD while the personnel cost represented only $\frac{1}{2}$ %.

RC System Cost.

- a. Contingency Deployment. The SAG directed D+60 days be used as the RC unit discriminator for this study. The contract officer's representative (COR) made available a listing of units to be used to develop two preliminary costs for a RC evaluation program.
 - b. Approaches. With the available data a mini-max approach was employed.
- (1) Minimum Cost. If fiscal concern is paramount, a minimum annual ECD based on quadrennial evaluations with RC evaluators is:

	Minimum	Cost=	\$3,026,445
MP	40,358	EN	1,298,971
MAINT	630	TK	476,379
FA (105mm)	108,010	IN	354,406
FA (155mm)	\$328,405	IN(M)	\$ 419,286

(2) Maximum Effectiveness. If primary concern is the evaluation effectiveness, the annual ECD based on biennial evaluations with Active Army evaluators for combat arms type units and MTC evaluators for MP units is:

FA (155mm)	1,	,006,320	IN(M)	\$1,311,492
FA (105mm)		194,208	IN	1,368,647
MAINT		7,140	TK	1,386,456
MP		129,744	EN	2,992,965
	Maximum	Effectiveness	Cost=	\$8,396,972

- (3) The Engineer cost appears high because of excessive ammunition cost.
- 9. Other Concepts.
- a. Opposing Forces within RC Unit. The AT 75 evaluation for 1-134 IN(M) used an A Company as the aggressor and simulated the reserve company. A Company was also evaluated in the battalion evaluation. The application appears appropriate when the RC unit will be evaluated at an RC post without benefit of AA support, and offers potential cost reduction particularly ammunition and POL. This approach was not used during AT 76.
- b. Core Cost Concept. This concept considers the plateau of operational cost which should be fairly consistant evaluation to evaluation. This includes ammunition, maintenance and POL for both the evaluated unit and evaluator group. To this may be added the evaluation specific costs personnel, travel and per diem considering source of personnel support and

the evaluation site. These costs could be "plugged in" for a specific evaluation and the attendant circumstances to provide an estimate for a specific ARTEP evaluation.

- 10. Findings and Summary.
 - a. Findings.
- (1) Base cost data were not available for Reserve Component Army Training Test evaluations.
 - (2) No investment cost was reported in training years 75 or 76.
- (3) The Army expense system does not provide maintenance data for direct support or general support of specific units.
- (4) Ammunition and personnel cost represent 73% to 93% of the ECD with Active Army evaluators.
- (5) The cost estimates sensitized were relatively invariant to cost element deviations of \pm 10%.
- (6) First year EC were high because of additional support and emphasis. For example, FA (155mm) evaluations for AT 75 utilized 93% more ammunition than recommended by the ARTEP while in AT 76 it was 9% below the ECD.
- (7) The Engineer average consumption of ammunition is only 14% of the ECD; the ARTEP recommendations appear high.

b. Summary. The discussion and tables in this annex represent all the information relevant to the development of ARTEP evaluation cost. The cost estimates were derived from data available as of 15 September 1976.
